

# CAPTURE2GO

## HIGHLIGHTS

Increase efficiency and task completion by providing mobile workers with accessible, timely information

Through access to your companies wireless network gain the ability to print and scan from your Apple mobile device

Enhance your return-on-investment by moving paper-intensive environments to efficient digital workflow, reducing operating expenses and overhead

Enable your Kyocera MFP to serve as a time-saving, on-demand printing/scanning solution

Add a cost-effective wireless document sharing component to your everyday workflow

## HyPAS™

Kyocera's HyPAS (Hybrid Platform for Advanced Solutions) is a powerful and scalable software solution platform. Through integration with widely accepted software applications, HyPAS will enhance your specific document imaging needs, resulting in improved information sharing, resource optimization and document workflows.

## WIRELESS DOCUMENT CAPTURE FOR TODAY'S MOBILE WORKFORCE

Kyocera's Capture2go solution is a value-added application that enables a Kyocera TASKalfa multifunctional product (MFP) connected to your wireless network to serve as a document on-ramp to Apple's popular wireless handheld devices – the iPhone®, iPod touch® and iPad™. Whether in a pinch or simply on-the-go, important documents – meeting minutes, weekly reports, event notifications, etc. – can be quickly scanned from the MFP directly to your wireless device. To get started, the user simply downloads the free Capture2go application from the Apple App Store to their cellphone or iPad. Documents can then be seamlessly captured and distributed. Now companies of all sizes, government offices, and public/private schools, can leverage their investment in Kyocera MFPs and wireless technology to keep in touch with traveling colleagues, remote employees and active students.

### HOW IT WORKS:

With Capture2go your HyPAS-enabled network Kyocera MFP links directly with Apple wireless devices. For example, to scan a document to an iPad, the user simply logs on to their wireless network, opens the Capture2go app from the iPad touch screen then searches the wireless network for available Kyocera MFPs. Choose the desired MFP and select "Scan document". A file name is entered and scan settings are selected – Color or B&W, Resolution, etc. After the document

(sales brochure, price list, newsletter...) is placed on the document feeder, the "Start" button (on the iPad) is pressed. With no further user intervention, the MFP automatically scans the document, converts the image into a universal PDF format, and then displays the captured file on the iPad. The user can then choose to "Print," "Email" or "Forward" the file to anyone in the Contacts list. It's that easy.

For increased flexibility, Capture2go enables wireless device users to print previously scanned files or images from their photo library on any authorized Kyocera network printer. Powerful Kyocera MFPs address daily document processing needs, while Capture2go extends system functionality to enhance accessibility to information. In today's fast-paced world, people who have timely access to information also have the competitive edge.
